ABOUT ME

Information Systems student with a strong interest in the IT field, particularly in technical support, networking, and cybersecurity. I am a self-driven, resourceful, and service-oriented individual, with a strong motivation to continuously learn new technologies and turn that knowledge into practical solutions. Currently seeking my first professional opportunity in IT, particularly in roles such as IT Support, Help Desk, Technical Support, Junior Network Specialist, or similar positions, where I can apply my knowledge, continue learning, and develop professionally within the industry. Open to different job opportunities and work arrangements, including relocation and rotating schedules.

WORK EXPERIENCE

IT Repair & Technical Support, Freelance

Jun. 2024 - Dec. 2025

- Diagnosed and resolved hardware and software incidents affecting PCs and laptops, identifying root causes and implementing appropriate technical solutions.
 - Installed, configured, and optimized Windows and Linux operating systems.
 - Performed preventive and corrective maintenance, improving equipment performance, stability, and reliability.
 - Performed hardware upgrades, including SSD installation and configuration and RAM memory expansion.
 - Detected, removed, and helped prevent malware, viruses, and potentially unwanted software.
 - Advised users on equipment maintenance, security, and best practices to improve the performance and safe use of their devices.
-

EDUCATION

Universidad Nacional de Luján

2017 - Present

Bachelor's Degree in Information Systems

PROJECTS

Homelab – IT Infrastructure & Support

- Designed and implemented a Homelab environment from scratch to simulate an enterprise IT infrastructure, integrating Windows Server, Windows 10, on-premises Active Directory, Entra ID, Microsoft 365, and Group Policy Objects (GPOs).
- Implemented virtualization using Hyper-V and infrastructure monitoring with Zabbix and Grafana, while also managing Linux systems based on Debian.
- Configured VPN and remote access solutions using TeamViewer to simulate remote support and connectivity scenarios.
- Automated application deployment and administrative tasks using PowerShell and PDQ Deploy, gaining hands-on experience in IT administration, technical support, and troubleshooting.
- Published the project on GitHub, receiving 32 stars, demonstrating practical experience and a strong interest in IT infrastructure and systems administration.

PowerShell – Automatización de Active Directory

- Developed a set of PowerShell scripts to automate user administration tasks in Active Directory.
 - Automated recurring account management operations, reducing manual tasks and improving the efficiency of administrative processes.
 - Continuously developing and enhancing the project, adding new features and improvements focused on IT Support, SysAdmin, and process automation.
-

COURSES

CompTIA Security+ (SY0-701) | CompTIA Network+ (N10-009) | CompTIA A+

2026

- CompTIA

Cisco Certified Network Associate (CCNA)

2026

- Cisco

- Google
-
